

POWER DISTRIBUTION

Equipments and packages, Onboard installation and coordination, Commissioning,

Training

Manufacturing in our switchboard factory

- Switchboards until 10 000 A
- Distribution and control panels
- Machine, wheelhouse and communication control plates
- Refrigeration skid for propulsion switchboard
- Customized or standard according to your classification needs : BV, LR, DNVGL...

Onboard Installation

- Anticipating and controlling the specific requirements of the marine environment
- Cabling and connecting the full electrical installation

Implementation

Providing comprehensive electrical packages

- Design
- Fabrication
- Delivery of the full equipment for the electrical systems onboard

Coordination

- Managing your project autonomously with our skilled technicians
- Managing and coordinating installations with local partners or yard electricians

Sea trials

- Verifying the conformity of cabling and connections
- Checking the equipment operation
- Classification control and survey
- Commissioning, harbour trials

- Checking operational condition at sea
- Full validation of equipment
-

Train crews on different electrical and automated systems

Theory

- Presentation of the complete electrical installation
- Principle of equipment operation
- User instructions and maintenance

Partie pratique à bord

- Location of electrical equipment and components: cabinets, interfaced systems ...
- Operation of the installation with the various control stations
- System management
- Intervention / maintenance

Sorties en mer

- Assistance and advice
- Handling of the ship
